Market Value Accuracy Report - January 2026

Valuation accuracy is assessed as the difference between the VesselsValue valuation on the day before a sale and the reported sale price.

Measurement	Unit	Last Year	Last 5 Years
		01/01/2025 to 01/01/2026	01/01/2021 to 01/01/2026
Number of Transactions		628	3,278
Mean Error	USD mil	0.03	0.08
Mean Percentage Error	%	2.3%	1.53%
Interquartile Range	USD mil	2.16	2.19
Percentage Interquartile Range	%	11.81%	12.04%

< 10%	465	2,298
10 - 20%	115	671
20 - 30%	28	183
30 - 40%	8	66
40 - 50%	6	31
> 50%	6	29

Definitions

- Mean is the arithmetic average of the data (either error or percentage error). It is a measure of central tendency.
- Interquartile range is the range of the central 50% of the data (either error or percentage error). It is a measure of spread.

Comments

- This report covers the following ship types; Bulkers, Tankers, Containers, LPG & LNG.
- This document summarises the latest results of a continuous process by which the reported prices at which vessels are sold are compared with the valuations produced by VesselsValue's algorithms.
- The period from which the vessel sales have been analysed is as shown.
- Each sale price is compared with the valuation which was produced by VesselsValue's algorithms on the day before the sale to ensure that no information regarding the sale is available to the system.
- Valuation difference is defined as VesselsValue's value minus the sale price. Therefore, a positive value indicates a valuation greater than the sale price.
- Sales which took place in circumstances which would have made the sale price unreflective of the fair market value at the time have been excluded from this analysis.
- Examples of such circumstances are the presence of charters, options, subjects, sales between financially related entities and vessels sold out of class.
